

# The Newborn Foal Fact Sheet

Amanda M. House, DVM, DACVIM  
University of Florida CVM

## Normal Behavior:

- Suckle reflex: within 5 minutes of birth
- Sitting sternal within 10 minutes
- Standing up within 1-2 hours
- Nursing within 2-3 hours
- Pass meconium in 6-8 hours or sooner

## Physical Examination:

- Temperature: 99-102 F
- Heart rate: 80-120 beats/minute
- Respiratory Rate: 20-40 breaths/minute
- Gums: pink and moist, capillary refill time < 2 seconds
- Pass pasty feces 3-5 times per day (but often hard to see in stall)

## Remember to:

- Check IgG in all foals – stall side blood test
- Have vet check ALL foals at 12-24 hours old (the sooner the better)
- Normal IgG = 800 mg/dl or higher
- Dip umbilical stump with dilute Nolvasan 2-3 times in the first day of life

## Time to Intervene:

- Retained placenta in mare > 3 hours
- Weak or unable to stand
- Has not nursed within 3-4 hours
- No colostrum or milk from dam
- No meconium passed, bloated or colicky
- Hypothermia (Temp < 99) or fever
- Diarrhea
- Difficulty breathing
- Not nursing well, lethargic, heart or respiratory rates too fast
- Lameness or swollen joint

Please remember to call your veterinarian if you have any concerns. We are available at the University of Florida 24 hours a day at 352-392-2229.
